## Report Summary

This research documented the state of Prey Lang communes; in particular, the impact of companies granted economic land and mining concessions, and businesses and individuals illegally cutting down trees to sell as luxury timber, to use the land for other purposes, or both. The research documents the direct effect of forest loss on the people living in these communes, and on the indigenous people who have relied on the forest for generations.

A review of the data collected from all communes exposed three primary areas of concern for the future of Prey Lang:

- 1. Prey Lang forest has been significantly reduced by illegal logging by businesses and individuals, and by concession companies.**
- 2. Authorities and others in positions of power contributed to the deforestation of Prey Lang, either directly or indirectly.**
- 3. The culture and livelihoods of Kuy indigenous and Khmer people suffered as a direct result of forest loss.**
- 4. Where natural resources were protected, it was due to the action and determination of the local community, in some cases working in partnership with commune authorities.**

## Recommendations

In response to the data and conversations collected during this study, the Prey Lang Community Network continues to recommend:

- 1. A halt to future economic land, mining and forestry concessions, and suspension of all those already granted in Prey Lang and the surrounding buffer areas.**

Despite government statements that concessions had been suspended, this report shows that companies were still actively clearing, logging and exploring Prey Lang resources at the time of this research.

- 2. The government to finalize the draft sub-decree to give Prey Lang official protected status as a heritage for Cambodia.**

The trade in forest timber documented in this report is evidence that businesses, individuals and government did not consider the protection of Prey Lang a serious matter. The protection of Prey Lang requires the full weight of the law.

- 3. Rehabilitation of cleared and damaged areas of Prey Lang, including those documented in this report.**

The uncontrolled forest clearing and logging shown in this report has affected what was once the unified forest ecosystem. This threatens not just those sections, but the biodiversity and sustainability of the whole of Prey Lang.

- 4. Official recognition of the Prey Lang Community Network as partners with the government in co-management of the forest.**

In many communes, researchers found evidence of community members working successfully with authorities to protect the remaining natural resources, and to document and report illegal activity.

## Background

Prey Lang is the largest lowland, dry, evergreen forest remaining in Cambodia, and on the Indochina Peninsular. It is also arguably the largest intact area of indigenous land left in Cambodia. Located between the Mekong and Stung Sen rivers, the forest straddles four provinces: Preah Vihear, Kampong Thom, Kratie, and Stung Treng.

The Prey Lang Community Network emerged in 2007 from the groups and communities that pressured the government to stop widespread commercial logging in Prey Lang. Since then it has continued to manage, organize, educate, demonstrate and lobby to save this vital natural resource.

This report is the result of an extensive data collection project covering 176 villages in 33 communes in the Prey Lang area. These communes represent

Figure 1. Location of the 33 communes in this research

While Prey Lang is said to cover about 3,600 square kilometers of land in four provinces (and certainly more than the 33 communes in this study) the research team selected these communes according to the following criteria:

- The commune was located in the Prey Lang area, as defined by the region indicated in the Cambodian Government’s draft sub-decree of 2011 (see **Appendix 14**); and
- A significant proportion of residents were directly or indirectly reliant on Prey Lang natural resources.

The table below shows the names of the 33 communes included in the research.

Anlong Chrey	Kampong Cham	Riep Roy
Anlong Phe	Kampong Sralao 1	Sam Ang
Boeung Char	Kampong Sralao 2	Sandan
Boeung Lvea	Kang Cham	Sangke 1
Chamkar Leu	Khyang	Siem Bok
Chheb 1	Kleng	Sochet
Chheb 2	Kraya	Sre Russei
Chheu Teal	Meanrith	Tasu
Chrach	O’Rai	Thmea
Chroy Banteay	Preah Rumkel	Tum Ring
Dang Kambet	Putrea	Voadthonak

These communes represented **31,228 households**, and an official population of **143,701 people** (70,544 male, 73,157 female). See **Appendix 11** for commune household and population data.

## Prey Lang Community Network Commune Report

The main purpose of this research was to assess the impact of past and present economic land, mining and forest concessions (referred to in this report as **concession**) companies, and of small- and large-scale illegal logging activities on Prey Lang communities.

This report includes a summary of the common factors and key areas of concern for the Prey Lang region and the network as a whole, collected from various sources in each commune. Data from this research was also collated into profiles of each commune as a resource for the Prey Lang Community Network, NGO partners and the public to help in protecting Prey Lang.

### Methodology

Researchers, which included PLCN members and assisted by PLCN's youth (the **research team**) visited each commune between 8 April 2013 and 30 January 2014 to meet with local officials, community leaders, local villagers, Prey Lang representatives and activists to record qualitative discussions (see **Appendix 1** for a list of the topics discussed) and to gather quantitative data on resources, infrastructure and population.

The Research Team collected data over several phases, starting by mapping the Prey Lang resource areas on 8 April 2013, followed by visits to each commune on the dates shown below. **Appendix 13** contains more detail of commune visits and research field activity.

Dates	Communes	Province
7 May - 9 May 2013	Chheb 1 Chheb 2 Chrach Kampong Sralao 1 Kampong Sralao 2 Sangke 1	Preah Vihear
16 May - 23 May 2013	Putrea Tasu Khyang Thmea Riep Roy	Preah Vihear
10 July - 14 July 2013	Preah Rumkel Sam Ang Anlong Chrey Anlong Phe	Stung Treng
2 August - 8 August 2013	Sre Russei Chamkar Leu O'Rai Kang Cham	Stung Treng
22 September - 25 September 2013	Siem Bok	Stung Treng
26 September - 1 October 2013	Boeung Char Kampong Cham	Kratie
28 October - 3 November 2013	Boeung Char Voadthonak Chroy Banteay	Kratie
4 November -9 November 2013	Sochet Kraya Boeung Lvea	Kampong Thom

## Prey Lang Community Network Commune Report

Dates	Communes	Province
4 November 2013 - 30 January 2014	Meanrith Sandan Dang Kambet	Kampong Thom
25 November - 6 December 2013	Tum Ring Chheu Teal Kleng	Kampong Thom

In most communes, people interviewed included:

- Commune Chief
- Commune Council members
- Commune Police officers
- Military Police
- Village Chiefs
- Village Council members
- Community Forest leaders and/or representatives
- Community Fishery leaders and/or representatives
- Prey Lang Community Network members
- Kuy indigenous representatives
- Elderly village residents
- School principals and teachers
- Head Monks of local wats or pagodas
- Other commune residents and representatives

Where available, the research team asked for official commune records such as census results and commune investment plans to confirm the data they collected.

Most information was gathered through conversations with people in the communes, speaking in either an official capacity as a representative of the local authority, or as local residents recalling what they had witnessed or experienced in their commune.

Therefore, unless specifically indicated, the statements in this report represent assertions, statements and opinions of local people in each commune that were recorded by the research team during their discussions, and do not necessarily represent the findings of evidence-based research.

This report uses the past tense to indicate that it represents a snapshot of the data and discussions at the time of the research, as indicated by the dates in the table above.

## Findings

### 1. Deforestation continues

#### Illegal logging

At the time of this research, the most serious threat to Prey Lang was illegal logging (either in Prey Lang, Community Forest, or other biodiversity protected areas) by individuals or businesses. This logging was either for the purpose of selling the timber gained, or to clear the land for other uses.

Figure 2. Trees cleared by people migrating into Boeung Lvea commune

All 33 communes reported to the research team that illegal logging had taken place at some level within their forests. As mentioned later in this summary, as many as 20 Community Forests had been completely cleared by illegal logging, and recently arrived residents were reported as involved in a significant number of the communes.

Illegal logging in Prey Lang happens for different reasons: As an income source, clearing land for farming or planting, and housing to name a few. It was not only driven by a desire to make money by selling the quality timber products available for free to anyone with a chainsaw. People moving into villages needed space for houses, to grow their crops and to support their families, and in some cases they were guilty of illegally clearing forestland.

The vast majority of illegal logging, however, locals attributed to business people, people in positions of authority, or those with power or influence in the commune or Province. For example, representatives in Chheb 1 commune reported being powerless to stop illegal logging within Community Forests due to the offenders' positions or their influence with authorities. In Thmea, Chrach and Riep Roy communes, locals daily witnessed cars with RCAF, police, military police and other official registration plates, armed with guns to protect the transportation of timber out of Prey Lang.

**Inter-Commune migration**

What long-standing residents called “newcomers” or people migrating into the commune, (mostly from other communes nearby, but most frequently said to come from Kampong Cham) were often identified as a cause of forest loss. This may simply be because they required land to build their house or farmland, or because they took part in deliberate illegal logging as an income source.

Whatever the reason for forest loss at the hands of these more recent arrivals to the communes, long-standing residents and Kuy people were of the opinion that they had different standards and beliefs when it came to the management of forest and natural resources.

Figure 3. A luxury timber processing site in Romchet Village, Sochet Commune

Figures 4 & 5. Trees illegally cut down were then transported by truck out of the commune

The research team found more than 40 small- and large-scale wood-processing sites during the research. Community members reported that most of these to be connected to government officials from the commune and from outside the commune.

### Concession companies

In total, there were **53 companies** named by people that operated or were operating in these 33 communes. It was difficult to obtain official data on the detail of all concessions within these communes, but those that were confirmed covered significant land area in this fragile region. Concession activities included rubber plantations, timber mills, construction, gold mining and exploration, and coal mining. The table below shows the land area given to concessions, and **Appendix 2** lists details of the companies operating under these concessions.

Comapny type	Number	Total land area (ha) *
Economic Land Concession (ELC)	32	234,784.08
Mining	13	264,693.23
Forest Concession <sup>1</sup>	8	932,434.20
Social Land Concession (SLC)	1	4,000.00

\* This represents total concession area and not the concession area within the 33 communes studied.

In spite of the government's draft sub-decree and statements on Prey Lang's status as a protected area, deforestation by concession companies continued at the time of this research. The logging and clearance activities of some concession companies had gone beyond the limits of their concessions, and others had traded in illegally logged timber from surrounding forest.

Figure 6. Forest timber cut down by CRCK Rubber Development Co. Ltd in Dang Kambet commune

Where concessions had expired or companies had ceased their activity, other companies had taken over. In many communes (e.g. Putrea and Sam Ang), commune authorities were unable to confirm who was operating under valid concessions or other legal agreements, and in what areas. Information was not easy to obtain or clarify, even from government sources. This meant that individuals often did not know whether logging they witnessed (or carried out) was legal or illegal.

---

<sup>1</sup> While these concessions were suspended by official decree in 2002, it is unclear whether some are still operating.

Figure 7. Trench dug by a mining concession company in the forest in Thmea commune

In eight communes (Anlong Phe, Chheu Teal, Khyang, O'Rai, Putrea, Sam Ang, Siem Bok and Sre Russei) locals reported that no concession companies were operating at the time of this research. However, in all but one of those communes (Khyang) concession companies had caused extensive deforestation in previous years.

### **Social Land Concession**

A social land concession (SLC) of approximately 4,000 hectares was granted by the government in villages of Sam Aong and Samake villages, in Meanrith Commune, Sandan District, Kampong Thom Province. The sub-decree dated 1 September 2013, clearly states that this SLC is for poor people who do not own land. However, the research team could not confirm from Meanrith Commune authorities that people without land were the ones allowed to live in the concession. In addition, villagers who live along side the SLC reported that they have suffered from the loss of resin trees and farmland due to the concession.

## **2. Abuse of power**

The second common theme to come from conversations in these communes, was of local and national government officials, business people, and other “powerful people” abusing their authority to take advantage of Prey Lang resources.

The community members that the research team spoke to asserted that this was either directly through logging, transport and sale of forest timber, or indirectly by accepting payment from those they should have prosecuted for illegal logging or transport. At the very least, people reported complacency and a lack of action from those responsible for enforcing the law and managing the forests, even when they were aware of crimes being committed.

In seven communes—Anlong Chrey, Kampong Cham, Kraya, O'Rai, Preah Rumkel, Siem Bok and Sochet—the research team witnessed checkpoints set up by authorities such as police, military police and Forestry Administration officials, not to stop or prevent timber transportation out of Prey Lang, but to collect money from those breaking the law.

Figure 8. Police sit on a vehicle loaded with timber cut from Prey Lang

Figure 9. Soldiers transport timber from the forest in Chroy Banteay, Kratie Province, near the border of Boeung Lvea, Kampong Thom Province.

### 3. Loss of livelihood and indigenous culture

In addition to the loss of biodiversity and one of the region's unique ecosystems, the loss of Prey Lang directly affected those who had depended on non-timber forest products for their survival and livelihood for generations, in particular, the indigenous Kuy people. Both commune authorities and older community members stated that resin, honey, fish, wood for housing, fruit, vegetables, traditional medicines, fish and wild game had all been affected by forest clearing and illegal logging.

The combination of clearing by concessionaires and illegal logging had reduced the capacity for community members, both Kuy and Khmer, to support themselves through traditional activities that required little or no capital.

#### Tapping resin trees

This valuable source of income for local families had been carried out by Khmer and Kuy people for many generations. There were 17 communes where no resin trees remained at the time of this research, and of the 15 communes where the research team could confirm data, only 881 families had 483,851 trees remaining, with a total of 25,312 trees lost<sup>2</sup> (**Appendix 9** has more detail).

This forced people to find other ways to support themselves and their families, which for some, meant leaving the commune, or, ironically, working for the companies that were responsible for clearing their resin trees.

Figure 10. Locals have been “tapping” resin trees sustainably in Prey Lang for generations

<sup>2</sup> Data from Sangke 1 not available.

As a consequence, local people said that they were no longer able to provide for themselves and their families in a sustainable way from the forest. In some cases local people also cut down trees and cleared areas to use for rotational crop farming or grazing, however they would clear only what they needed, leaving tree stumps that would re-grow when the land was left dormant. This was in sharp contrast to the clearing by concession companies, who would tear out the entire tree, including the roots, from thousands of hectares of land.

### **Indigenous language and culture**

Many people were either unaware of their ancestral origins, or unwilling to identify themselves as Kuy. From discussions with community members and commune authorities, the researchers identified a number of factors that were contributing to the loss of Kuy culture, language and identity in these communes.

- The Khmer Rouge ban on languages other than Khmer left a lasting impact on Kuy languages. Kuy language was spoken mostly by the older generation, but even they would use Khmer in daily conversation with others.
- Discrimination from outside groups who treated Kuy people as unintelligent and uneducated forest people. The migration of Khmer people into some of these communes in recent years brought this discrimination a lot closer to home.
- Government registration and identity documents deliberately overlooked or ignored identification of Kuy people; for example, on identity cards. Some Kuy did not challenge this, as they did not understand the implications for Collective Land Registration and other indigenous rights.
- Younger generations of Kuy people spoke Khmer almost exclusively, though some could understand basic Kuy.
- With no school or language teaching available for the Kuy language, researchers believe that, without intervention, it won't be long before the Kuy language is lost in these communes.

### **Trees, animals and traditional medicine**

Through conversations and records throughout these communes, it is plain that there had been a reduction in both the number and type of trees and animals in Prey Lang areas. People in these communes could name as many as 198 tree types (not including 16 types of vine), 37 different wild animals and 28 varieties of traditional medicine available in these communes in the mid-1990s to mid-2000s<sup>3</sup>. When talking about the forest at the time of this research, however, many communes named as few as four dominant types of tree, and as few as five types of native animal. While many locals—especially indigenous Kuy people—still use traditional medicines they gather from the forest, this too had been threatened through deforestation so they saw more need to rely on modern medicines, which required money to obtain.

### **Honey Community**

One promising new venture documented in Putrea commune was the honey community that locals established with the help of Ponlork Khmer organization in 2010. Similar to the concept of the Community Forests or Fisheries, this grass-roots organization promotes and defends the livelihoods of those in the commune who are earning an income through collecting honey. This group had 79 members at the time of this research. Appendix 7 has more detail of this Honey Community.

### **Community Forests and Fisheries**

Registered Community Forests and Fisheries allow the local community to manage and benefit from shared natural resources. There were a total of 63 Community Forests in 23 of the communes, and 44 Community Fisheries in nine communes. Boeung Char stood out in the establishment of community resources, with five

---

3 See **Appendix 3** for a list of these trees, wildlife and traditional medicines.

Community Forests and eight Community Fisheries, while Tum Ring commune's eight Community Forests was the highest number for any single commune<sup>4</sup>.

Figure 11. The remains of Kokoh Phaaob Community Forest in Tum Ring Commune

Community members and authorities tell of activity that threatened Prey Lang even in these protected areas. Conversations indicated that as many as 20 Community Forests were completely cleared by illegal logging, by settlers in the communes and by concession companies, while 39 other Community Forests were threatened by these activities. The research team photographed some extreme examples, including two of Chheu Teal's Community Forests, which had been completely cleared by illegal logging and concession activities. **Appendix 5** lists in detail the Community Forests that had been destroyed and those that were under threat at the time of this research.

The research team recorded discussions of other problems connected to Community Forests. In three communes—Kleng, Kraya and O'Rai—local residents believed that the Community Forest did not meet the needs of the community, was located too close to villages and had been established without proper consultation. In the case of O'Rai commune, local authorities reported that Community Forest members had given up on the area due to widespread logging, and had begun to illegally cut down trees themselves.

In Voadthonak commune, the local community had started an application to establish a Community Forest, which faltered when the NGO involved withdrew from the project. At the time of this research, locals were still pursuing the application as they watched concessionaire, CXPB Company, clear the land proposed for the Community Forest.

The research team documented only four Community Forests that weren't under threat at the time of this research, thanks to the activity of PLCN members.

The Community Forests and Fisheries that survived and remained untouched were, in most cases, those where the community members and local authorities had worked together to manage and patrol natural resources.

---

<sup>4</sup> See Appendices 5 and 6 for a full list of Community Forests and Community Fisheries in all 33 communes.

#### 4. An effective Community Network

PLCN from Stung Treng, Kampong Thom, Kratie and Preah Vihear provinces worked both locally and nationally, organizing, meeting and strengthening community capacity through training. Communities cooperated in their advocacy to prevent the activity of large scale logging in Prey Lang, and to protest against economic concession companies (e.g. PNT Company, Thy Nga Development and Investment Company, CRCK Company, Chhoung Hong Rubber Better Company, Think Biotech) and forest concession company Teng Saravuth, which had destroyed biodiversity and forest in Prey Lang.

The advocacy activity of PLCN had allowed Prey Lang to escape complete destruction so far, and meant that forest still remained at the time of this study.

Figure 12. Community members in Kampong Thom Province hand over evidence of illegal logging that they confiscated during their patrols to a Forestry Administration official from Tum Ring.

#### Challenges of the Prey Lang Community Network

While PLCN members worked hard to perform their obligation to protect the natural resources and national heritage of Prey Lang on behalf of all citizens, they believed that local authorities and government did not value them as an organization. On the contrary, they said that authorities rarely participated or cooperated with PLCN, and often restricted their freedom of expression and right to protect the forest, and used armed forces to threaten and intimidate the activists and leaders.

Community members said that they had witnessed authorities protecting private companies and those committing illegal logging. Even when PLCN called for the authorities to participate with the community, they did not always respond or cooperate, and government authorities had even accused the PLCN of being activists for the political opposition party. This continued to take place without resolution up to the time of this research.

From this, PLCN argues that those authorities (including some village chiefs, commune chiefs, district and provincial governors, Forestry Administration officers, environmental officials, police, military police) had avoided their official responsibilities.

The commune profiles developed as part of this research, and held by PLCN, document cases of PLCN and community members working without official cooperation to protect the forest and their natural resources from illegal logging. Several instances show that a lack of response or interference from local authorities delayed the efforts of the community in preventing criminal activity in Prey Lang.

### Getting results

There were other cases documented by the research team, however, where the Prey Lang Community Network and locals effectively managed and maintained their forest and its natural resources, including regular patrols and reporting those who committed illegal logging.

Putrea commune deserves special mention here, as there was no evidence of illegal logging in their Community Forest. Local authorities had gained agreement from all residents that the forest should be protected prior to its establishment. People in this commune actively sought to protect this shared resource.

Similarly, the community in Boeung Char told researchers that, in cooperation with Kratie Fishery Administration, they had cracked down on eight cases of illegal fishing and seized four machines since 2011. This cooperation had been fostered since the creation of the Community Fisheries in this important fish spawning area of the Mekong River.

From these discussions and select cases, the research team inferred that successful protection of Prey Lang natural resources occurred best where there was cooperation between the local community and government authorities at all levels.

Figure 13. Prey Lang Community Network's protest against CRCK Rubber Development Co.

## Other findings

The research also documented an inventory of community resources and infrastructure in these communes, including education, healthcare, Kuy indigenous traditions, community management, indigenous culture, historical heritage, ancient temples, religious buildings and population. Some of these are summarized here, while all data can be found in the appendices to this report.

### Education

All communes in this remote, difficult to access region had schools at the time of this research, in some cases thanks to the investment of the Cambodian Government through commune development projects. This means that education is now available in areas where there was none prior to the early 1990s.

The qualitative data collected in this research, however, revealed that community members and teachers believed that schools were under-resourced, under-funded and under-valued. The combination of low wages for teachers, a lack of proper school buildings and resources, and families who placed work before education meant that both teachers and students were often absent from school. This reinforced a lack of confidence in education as a worthwhile investment for children and their families.

There were a total of 161 primary schools, 24 secondary schools and two high schools in the 33 communes; eight of the communes had no secondary school<sup>5</sup>. The number of schools in each commune ranged from only two in Sangke 1, to 12 in both Boeung Lvea and Kraya.

---

5 Anlong Chrey, Anlong Phe, Kampong Sralao 2, Kang Cham, Sam Ang, Sangke 1, Siem Bok, Thmea.

Figure 14. A typical school class, held outdoors due to lack of buildings in Kampong Cham Commune

There was a large range in the number of students enrolled per school, from 12 students in a Sochet school, to 761 students in a high school in Sandan Commune (the average for all 33 communes was 164 students per school). The teacher to student ratio also showed wide variation across the communes, from six communes with less than 10 students enrolled for every teacher<sup>6</sup>, to 111 students enrolled for every teacher in a Kleng primary school (the average for all communes was 34 students per teacher). Note that student or teacher data from a few individual schools were incomplete and could not be confirmed at the time of this research. See Appendix

Figure 15. The Veal Denh School building in Anlong Chrey commune

### Health care

Of the 33 communes researched, only 13 had health centers. Local authorities stated that the majority of people living in these communes, had to travel to another commune, or even other provinces, to get health care.

Of the communes with no health center, all had “health agents” available in some villages—mostly trained by health centers in their province—who could provide limited local care, health advice and health education (especially for pregnant women) when needed.

### Historical sites

Perhaps due to the remoteness of some of these communes, many contained hidden or forgotten ancient temples and other historical sites. The research team were told of 36 sites, many of which had no records or documentation to indicate their origin or even existence. These historical sites are a reminder of the important place Prey Lang holds in Cambodia, which previous generations of Kuy people have preserved until now. In contrast, Cambodian society today does not pay attention to, or study, the history of Prey Lang.

**Appendix 8** lists the names (in Khmer and English) of the sites that local leaders and representatives were able to identify by name.

Apart from the possibility of interference or even destruction of these sites through land clearing, with the passing of the older generation in coming years, there is a danger that all knowledge of some of these sites will be lost

## Appendix 1: Discussion topics used to collect information in this research

1. Geography
2. General Commune administration and management
  - a. Structure and membership of Commune administration
  - b. Commune households and population figures
  - c. Healthcare services
  - d. Education
  - e. Monasteries
  - f. Indigenous community and natural resource management
    - i. Community Forest
    - ii. Collective Land Registration
    - iii. Community Fishery
    - iv. Eco-tourism sites, Mekong River dolphins and Mekong River biodiversity
3. Culture and tradition
  - a. Understanding the identity of Kuy indigenous people
  - b. Ceremonies and traditions of local people
  - c. Ancient temples and archeological sites
4. Livelihoods and natural resource management
  - a. Resin tapping
  - b. Livelihoods of local people
  - c. Use of traditional medicine
  - d. Types of timber and wildlife
5. Development projects in the commune
  - a. Non-governmental organizations
  - b. Economic land concession companies
  - c. Government development projects
6. Threats to local livelihoods and natural resources
  - a. Economic land concessions
  - b. Illegal logging activities
7. Contact details
  - a. Prey Lang activists
  - b. Local authorities and key contacts

## Appendix 2: Economic Land, Forest & Mining Companies

These tables show the details of the companies that operated concessions within the 33 communes of this study, at or before the time of this research (between April 2013 and January 2014, see **Appendix 13** for the dates of research for each commune). Some operated across multiple commune borders, and the land size indicates total size of the concession granted, not the size of the concession within these communes.

### Economic Land Concessions

Company Name	Commune	Size (hectares)	Sub-decree	Investor Country
P N T Co. Ltd	Riep Roy	7,900.00	Signed the contract with MAFF on May 5, 2010.	Vietnam
Thy Nga Development and Investment Co. Ltd	Riep Roy	6,060.00	Signed the contract with MAFF on November 25, 2009	Cambodia
CRCK Rubber Development Co. Ltd	Dang Kambet, Sandan	6,155.00	Signed the contract with MAFF on May 5, 2010	Vietnam
Tumring Rubber Co. Ltd	Tum Ring	6,200.00	Granted August 1, 2001	Cambodia
Heam Kok Ham Co. Ltd	Tum Ring	400.00	Rubber plantation in 2006: MOI No 1130: July 27, 2011	Unknown
Ratanak Khem Co. Ltd	Tum Ring	4,000.00	Rubber plantation in 2007 (cannot find sub-decree)	Unknown
Sameng Co. Ltd	Tum Ring	2,300.00	Rubber pantation in 2006 (cannot find sub-decree)	Unknown
Ta Bien Kampong Thom Rubber Development Co. Ltd	Kraya	8,100.00	Signed the contract with MAFF on July 18, 2007	Vietnam
Phouek Va Kampong Thom Rubber Development Co. Ltd (Mean Rithy Co. Ltd)	Kraya, Boeung Lvea	9,784.00	Signed the contract with MAFF March 16, 2006 (transferred to Phoeuk Va Rubber Development Kampong Thom in 2011)	Cambodia
HMH Co. Ltd	Kraya, Boeung Lvea	5,914.00	Signed the contract with MAFF on March 17, 2006.	Cambodia

## Appendix 3: Biodiversity in Prey Lang

The following lists represent an inventory of the names of wildlife, trees and other biodiversity that could be recalled by community members across the 33 communes at the time of this research (see the Methodology section in **Appendix 13** for dates from each commune). The names shown represent the common name most used by these people in the Khmer language, written in English. As this is a report of community-based research, no attempt was made to identify the scientific or English name of the items.

### Traditional Medicines

Below is the list of 26 types of traditional medicine, sourced from Prey Lang areas, that community members from all 33 communes were able to name at the time of this research.

Deum Chamka Trong, Deum Thlork Tol, Chy Pleung, Deum Angre Dek, Deum Sma Krobey, Deumcheu Kmao, Deum Rodeng Meas, Deum Smao Taseth, Deum Slapork, Deum Ko1, Deum Angre Dek, Bobros vine, Deum Chungkung Kangouk, Deum Sangke Sreng, Krovan vine, Sleng vine, Deumcheu Krom, Chambok mushroom, Cheukrom mushroom, Deum Angtong Sor, Deum Tromung, Deum Tronung AeUot, Deum Chma, Deum Plo, Deum Preah Torng, Deum Bay Nhanh

## Appendix 4: Traditional and local ceremonies

These are general descriptions of the ceremonies that community members said that they observed at the time of this research (between April 2013 and January 2014).

### Spiritual Forest Ceremony

Celebrated so that the spirits of the mountain, valley, and the streams that take care of the territory and forests would keep them peaceful and prosperous. Observed annually between January to March it is passed on from person to person and uses traditional musical equipment such as string bow, large barrel drums, and performed by village elders, parents and attendees. Each village organizes different types of food and materials for display at the site of the ancestral spirits, such as Cambodian rice cakes, sticky rice in banana leaves, chicks, chicken eggs, duck eggs, fish, Cambodian rice alcohol, sour palm juice, and pigs.

### Village Solidarity Ceremony

Celebrated to show solidarity and to thank the earth for supporting them and their livelihoods, all are welcome and food is shared amongst people. It is celebrated once every year (February or March) in accordance with Buddhist and Hindu practices. Videos and modern drums are used for dancing.

### Harvesting Ceremony

Celebrated to mobilize resources to build local infrastructure and public buildings, and to collect rice for monks. This ceremony is open to all including students, teachers, monks, laymen, nuns and other local or outside guests.

### Domestic Ancestral Prayers

Only celebrated when there were droughts, lack of food, cattle dying, and residential sickness in the region. Elders represented the ancestral spirits, who maintain the territory, and showed a way to answer pleas of those calling for rain or to get rid of disease in the village. They request care for the village, fruitful rice farming and would offer delicious food to the ancestral spirits. This prayer ceremony consists of musical equipment such as fiddle, drums, elders singing, Brahmanism religious teachers and elders who bring Khmer sticky rice cakes, Chinese cakes, piggy rice cakes, chickens, chicken eggs, duck eggs, Vietnamese noodles, white wine, sour palm juice and pig to be displayed at the ceremony hall of the village.

### Pi-ti Bon Neak Ta

Neak Ta is a traditional ceremony, local for each area or village, so that Laeung Neak Ta, documented in Kampong Sralao 2 by the research team, is specific to that area. An annual homage to the most prominent guarding spirit of the area. Once a year, people will build a small shrine to house offerings that the people from local villages bring on trays: pig, chicken, turtle, slaa mloo (a combination of betel nut, limestone and betel leaf), rice cakes, fried noodle, banana, cigarettes, coca-cola, betel leaves and nuts, candles and incense. Prayers are offered to the Neak Ta for protection and to keep opposing spirits away.

## Appendix 5: Community Forests

This list of Community Forests shows A. those that were destroyed (completely cleared of trees); B. those that faced threats to their sustainability; and those that faced no problem or threat at the time of this research. See Appendix 13 for dates that correspond to the research carried out in each commune (between April 2013 and January 2014).

Note that the comments in this table represent largely unedited field notes from the research team and may contain spelling or grammatical errors.

<b>A. Community Forests that have been destroyed</b>			
<b>Khmer Name</b>	<b>English Name</b>	<b>Location</b>	<b>Comments</b>
កកោះផ្កាប	Kokoh Phaaob	Belong to Khos Village (Tum Ring Commune, Sandan Distict, Kampong Thom Province). ## Appendix 8: Ancient temples and historical sites

This data was sourced from discussions with community members and commune records where available, on the dates shown for each commune in **Appendix 13**, between April 2013 to January 2014.

### Ancient temples identified during the research

Name	Location
Prasat O’Koul	Riep Roy
Prasat Char Lai	Riep Roy
Prasat Ork Neang (or Prasat Neang Pov)	Thmea
Prasat Kriel	Thmea
Prasat Sre Krouch	Chrach
Prasat Koundamrei	Chrach
Prasat Tuol Balang	Khyang
Prasat Yak Moy	Tasu
Prasat Tarik	Tasu
Prasat Trach	Chheb 2
Prasat Phnombrasat	O’Rai
Prasat Banteay Khmaekatsork	Boeung Char
Prasat Kamnorb	Boeung Char
Prasat Kamnorb Dingtung	Boeung Char
Prasat Chen La	Voadthonak
Prasat Trapang Broeus	Sochet
Prasat Sre brasat	Dang Kambet
Prasat Vealkok	Chheu Teal
Prasat Thmar Sar	Putrea
Prasat Neang Pov	Kampong Cham
Prasat Preah Se A	Kampong Cham
Prasat Sraschhuk	Meanrith
Prasat Kamnorb Chanchhnang	Meanrith

### Historical sites identified during the research

Name	Description	Location
Sanlong Toul Sralao	Tool and weapon workshop	Putrea
Veal Sanlong	Tool and weapon workshop	Putrea
Sanlong Veal Da	Iron workshop	Putrea
Sanlong Sraekrouch	Steel melting workshop	Chrach
Sanlong chamroeun	Steel melting workshop	Chrach
Sanlong Trapaing Romchey	Steel melting workshop	Sangke 1
Sanlong Arch Daek	Steel melting workshop	Sangke 1
Sanlong Chuon Nath	Steel melting workshop	Sangke 1
Sanlong Trapaing Troep		Chheb 2
Sanlong Anlong Chrey	Steel melting workshop	Anlong Chrey
Koh Banteay	Considered a sacred area	Preah Rumkel
Kamnorb Preah Rumkel	Considered a sacred area	Preah Rumkel
Damnak Sdech		Anlong Phe

## Appendix 9: Islands located in Prey Lang communes

The research team identified these 57 islands located in the 33 communes of this study.

No	Island Name	Commune
1	Koh Lngor	Preah Rumkel
2	Koh Chheu Teal Touch	Preah Rumkel
3	Koh Chheuteal Thom	Preah Rumkel
4	Koh Chheu Teal	Preah Rumkel
5	Koh Khornkheann	Preah Rumkel
6	Koh Khornkaen	Preah Rumkel
7	Koh Khornthao	Preah Rumkel
8	Koh Tunsay	Preah Rumkel
9	Koh Banteay	Preah Rumkel
10	Koh Lon	Preah Rumkel
11	Koh Peang	Preah Rumkel
12	Koh Kok	Preah Rumkel
13	Koh Sambour	Preah Rumkel
14	Koh Russei	Preah Rumkel
15	Koh Preah	Siem Bok
16	Koh Preal Touch	Siem Bok
17	Koh Preal Thom	Siem Bok
18	Koh Tanhaev	Siem Bok
19	Koh Traing	Siem Bok
20	Koh Kounsat	Siem Bok
21	Koh Tanam	Siem Bok
22	Koh Preav	Boeung Char
23	Koh Phlorng	Boeung Char
24	Koh Broeus	Boeung Char
25	Koh Sampan	Boeung Char
26	Koh Inchey	Boeung Char
27	Koh Mneas	Boeung Char
28	Koh Chrim	Boeung Char
29	Koh Romchek	Boeung Char

30	Koh Preah Trabaek	Boeung Char
31	Koh Narong	Boeung Char
32	Koh Touk	Boeung Char
33	Koh Krabei	Boeung Char
34	Koh Sampong Thom	Boeung Char
35	Koh Sampong Touch	Boeung Char
36	Koh Rosey	Boeung Char
37	Koh Preal	Boeung Char
38	Koh Chang Ha	Boeung Char
39	Koh Ambil thom	Boeung Char
40	Koh Preahpnom	Boeung Char
41	Koh Moul	Boeung Char
42	Koh Sambour	Boeung Char
43	Koh Vaeng	Boeung Char
44	Koh Chheateal	Boeung Char
45	Koh Dambang thom	Boeung Char
46	Koh Dambang touch	Boeung Char
47	Koh Ambil touch	Boeung Char
48	Koh Rongeav	Boeung Char
49	Koh Damlong touch	Kampong Cham
50	Koh Damlong thom	Kampong Cham
51	Koh Neangreach	Kampong Cham
52	Koh Paeng	Kampong Cham
53	Koh Phdao	Kampong Cham
54	Koh Beaysamnom	Kampong Cham
55	Koh thkor	Kampong Cham
56	Koh Kravanh	Kampong Cham
57	Koh Paengsatom	Kampong Cham

## Appendix 10: Families tapping resin trees in each Commune

PLCN has compiled and maintain an inventory of resin trees and owners for each commune. This table shows the total number of families in each commune who still have access to, and still tap, resin trees as an income source at the time of this research, between April 2013 and January 2014. Appendix 13 details the dates that these data were collected in each commune.

Commune	Families	Trees	Lost <sup>1</sup>
Anlong Chrey	53	6,460	140
Anlong Phe	82	48,610	
Chamkar Leu	67	12,320	
Chheb 1	46	16,263	
Chheb 2	101	22,947	
Dang Kambet	29	3,070	16,730
Kampong Cham	36	25,592	2,220
Kang Cham	206	112,438	
Meanrith	126	169,820	4,992
Riep Roy	20	4,495	
Sam Ang	5	5,250	280
Sandan	25	35,150	950
Sangke 1	26	- <sup>2</sup>	
Siem Bok	21	10,730	
Sre Russei	4	470	
Thmea	60	10,236	
<b>Total</b>	<b>907</b>	<b>483,851</b>	<b>25,312</b>

### Notes

1. Not all communes were able to quantify or confirm the number of resin trees cleared, or over what time period they were lost.
2. The research team was not able to confirm the number of resin trees in Sangke 1 commune at the time of this research, however they could confirm that 26 families were still tapping resin in the commune.

## Appendix 11: Commune household and population data

This data was sourced from commune records and official census data where available, on the dates shown for each commune in **Appendix 13**, between April 2013 to January 2014.

**ស រៀប ចំ**

**ជំពូកទី ១  
បទប្បញ្ញត្តិទូទៅ**

**មាត្រា ១.-**

អនុក្រឹត្យនេះមានគោលដៅបង្កើតតំបន់ព្រៃការពារ សម្រាប់អភិរក្សជីវចម្រុះ «ព្រៃឡង់» ដែលស្ថិត នៅក្នុងខេត្តក្រចេះ ខេត្តកំពង់ធំ ខេត្តព្រះវិហារ និងខេត្តស្ទឹងត្រែង។

**មាត្រា ២.-**

អនុក្រឹត្យនេះមានគោលបំណងដូចតទៅ៖  
- ការពារប្រភេទព្រៃស្រោងតំបន់ទំនាបកណ្តាលដែលមានសក្តានុពលជីវចម្រុះខ្ពស់

- ការពារ និងអភិរក្សវត្ថុជាតិ ព្រៃឈើ និងសត្វព្រៃគ្រប់ប្រភេទ និងប្រភេទដែលកំពុង រងគ្រោះថ្នាក់ជាសកល
- រក្សាលំនឹងមជ្ឈដ្ឋានធម្មជាតិ រៀបចំស្តារឡើងវិញនូវប្រព័ន្ធអេកូឡូស៊ីដែលខូចខាត ដើម្បីផ្តល់ទីជម្រកការស្នាក់អាស្រ័យសុខសាន និងការបន្តពូជរបស់ជីវចម្រុះ គ្រប់ប្រភេទ
- រួមចំណែកការពារ និងអភិរក្សដោយអនុវត្តគោលដៅអភិវឌ្ឍសហស្សវត្សរបស់ រាជរដ្ឋាភិបាលក្នុង ការគ្រប់គ្រង និងថែរក្សាគម្របព្រៃឈើ
- រួមចំណែកថែរក្សាប្រពៃណីទំនៀមទំលាប់ និងជំនឿសាសនារបស់សហគមន៍ មូលដ្ឋានដែលរស់នៅ ក្នុងតំបន់ព្រៃការពារ
- រក្សាការប្រើប្រាស់ធនធានធម្មជាតិដោយសហគមន៍មូលដ្ឋានដើម្បីលើកស្ទួយកម្រិត ជីវភាពប្រជាពលរដ្ឋក្នុងតំបន់ និងរួមចំណែកអនុវត្តកម្មវិធីរបស់រាជរដ្ឋាភិបាលក្នុង ការកាត់បន្ថយភាពក្រីក្រ
- រួមចំណែកអភិវឌ្ឍសេដ្ឋកិច្ចសង្គមប្រកបដោយនិរន្តរភាព តាមរយៈការចូលរួមគ្រប់ គ្រង ប្រើប្រាស់ធនធានព្រៃឈើដោយសហគមន៍មូលដ្ឋានអភិវឌ្ឍន៍ទេសចរណ៍ ធម្មជាតិ អេកូទេសចរណ៍ និងសកម្មភាពប្រើប្រាស់ផ្សេងទៀតដែលមានផល ប៉ះពាល់តិចបំផុតដល់ធនធានជីវចម្រុះព្រៃឈើ និងសត្វព្រៃ
- ការពារបរិមាណស្តុកកាបូនដែលស្ថិតនៅក្នុងគ្រប់ប្រភេទវត្ថុជាតិ ដើម្បីកាត់បន្ថយ ការសាយភាយ ឧស្ម័នកាបូនិចទៅក្នុងស្រទាប់បរិយាកាស
- ចូលរួមកាត់បន្ថយការប្រែប្រួលអាកាសធាតុតាមរយៈការការពារព្រៃឈើ
- ការពារការនឹងការហូរច្រោះដី ដីជាតិដី ទឹកជំនន់ រក្សានិយ័តភាពប្រភពទឹក និង គុណភាពទឹក
- អភិវឌ្ឍសេដ្ឋកិច្ចតាមរយៈការការពារជីវចម្រុះ និងប្រព័ន្ធមជ្ឈដ្ឋានព្រៃឈើ
- ទ្រទ្រង់សកម្មភាពផ្សេងៗរួមមានការសិក្សាស្រាវជ្រាវវិទ្យាសាស្ត្របច្ចេកទេសដើម្បី អភិវឌ្ឍន៍ អភិរក្សទីជម្រកនិងជីវចម្រុះ ការអប់រំផ្សព្វផ្សាយ ការបណ្តុះបណ្តាល ការអភិវឌ្ឍន៍សហគមន៍មូលដ្ឋាន ការអង្កេតតាមដានពីភាពប្រែប្រួលបរិស្ថានដែល ទាក់ទងទៅនឹងការអភិវឌ្ឍប្រកបដោយនិរន្តរភាព និងការអភិរក្សក្នុងកំរិតមូលដ្ឋាន កម្រិតជាតិ និងកម្រិតតំបន់។

**ជំពូកទី ២**  
**ការកំណត់តំបន់**

**មាត្រា ៣.-**

តំបន់ព្រៃការពារ និងអភិរក្សជីវចម្រុះ "ព្រៃឡង់" មានផ្ទៃក្រឡាសរុបទំហំ ៦១៥ ៣០៦ ហិកតា ស្ថិតក្នុងខេត្តក្រចេះ ខេត្តកំពង់ធំ ខេត្តព្រះវិហារ និងខេត្តស្ទឹងត្រែង មានប្រព័ន្ធខ្សែព្រំបិទកំណត់ដោយបណ្តាចំណុចគោល ដែលមាននិយាមកា:
